# Are small towns a good place for SMEs to innovate ? The case of 15 agrifood innovations in southwestern France

Geoffroy Labrouche, UT2J Rachel Levy, ENSFEA <u>Geoffroy.labrouche@univ-tlse2.fr</u> Rachel.levy@ensfea.fr

This research was supported by the PSRD4 programme (project REPRO-INNOV, 2016-2020) funded by INRA and the Region Occitanie

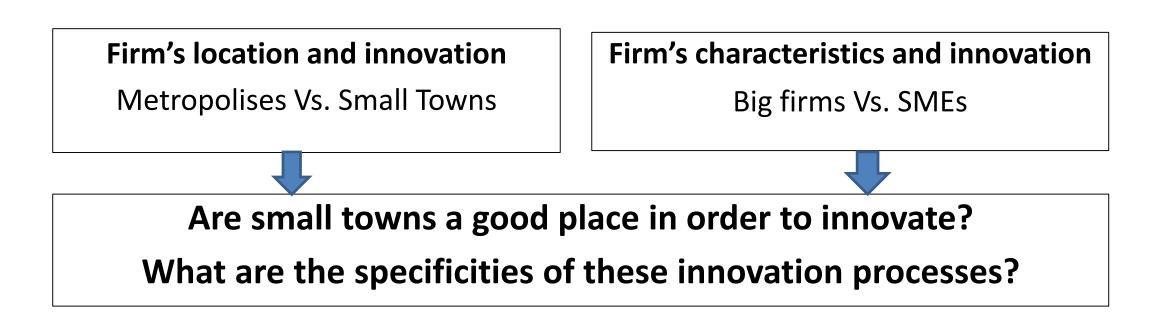

## Motivations

 Several studies in both economics and geography hilight the idea that growth is mainly driven by metropolises (Davezies and Pech, 2014; Robinson, 2013)

=> Constested by Bouba-Olga and Grossetti (2018)

- In Europe, half of the population lives in small towns (European Commission, 2011; Hamdouch et al., 2017).
- Small towns are at the heart of current debates and public policies especially in France (Yellow vests...).

## **Research question**

- => Focus on SMEs (low absorptive capacity +lack of resources to innovate)
- => Focus on agrifood sector (proximities with agricultural resources)
- => Focus on Southwestern France

### Literature review : an introduction

- Which factors explain SMEs' innovative activities?
  - The location of firms: metropolis vs other type of areas?
  - The determinants of innovation : choice vs constraint?
  - The practices of innovation: open vs closed innovation?

#### Literature review: Location of innovative activities

- Location in a metropolitan area is a factor favouring the production of innovation (externalities, agglomeration effects...) (Bosma et al., 2008; Frenken and Boschma, 2007).
- Rural areas can also favour innovation (especially in the case of agrifood firms) (Esparcia, 2014; Fearne et al., 2013; García-Cortijo et al., 2019).
- Small towns are a specific urban category that allows firms to benefit from both the advantages of metropolitan areas and rural areas without suffering all the disadvantages (Labrouche and Levy, 2019).
- Question: Do agri-food SMEs located in small towns linked both to rural and metropolitan areas – have specific innovation practices?

#### Literature review : determinants of SMEs' innovation

- SMEs' innovation practices highlight the fact that innovation is constrained by the demand (Demand pull), especially in low-tech industries (von Tunzelmann and Acha, 2013).
- Some studies show that even in SMEs, innovation can be a choice and not a constraint, especially when innovations are determined by the supply-side (science-push) or by the will of entrepreneurs (Edwards et al., 2005).
- The entrepreneur therefore plays a role in these processes and in particular in small towns (Fritsch and Storey, 2014; Salder and Bryson, 2019).

 Question : What are the determinants of innovation produced by agrifood SMES localized in small towns ?

#### Literature review : open vs. closed of innovation

- Many studies in the management literature have highlighted the existence of collaborative or open innovation practices (Chesbrough, 2003; Vanhaverbeke, 2017).
- SMEs and large companies practice open innovation in a different way (Christensen et al., 2005).
- If SMEs have difficulties to manage collaborative innovation, due to resource constraints (Gassmann et al., 2009; Spithoven et al., 2013), these practices allow firms to complete their resource (Labrouche and Kechidi, 2016).

• Questions: Are open innovation practices a choice or a constraint in these areas?

# Methodology: 15 case studies of innovations

- Step 1 : Selection of 5 small towns localised in Occitanie
- Step 2: Selection of 10 agrifood innovative firms localised in the 5 selected cities
- Step 3 : Realisation of 10 semi-directives interviews with the firms' entrepreneurs :
  - Theme 1: Trajectory of firm and entrepreneur
  - Theme 2: Innovative practices: focus on the two majors innovations of each firm
  - Theme 3: Pros and cons localisation in a small cities for the firm
- Step 4 : Coding of the interviews with Nvivo=> emergence of 22 categories (double-blind coding)
  - 7 types of innovation
  - 9 determinants to innovation
  - 6 barriers to innovation activities
- Step 5: second phase of coding: code of 225 verbatim inside the 22 categories defined in step 4 (double-blind coding)
- Step 6 : Principal Components Analysis using the numbers of verbatim for each categories
  - Hypothesis : number of verbatim = importance of each categories for the entrepreneurs
- Step 7: Illustration of the 4 types of innovations using the verbatim and the description of ideal type innovation

# Result 1: Various forms of innovation

| Innovation   | Characteristics              | Nb of<br>verbatims | Nb of innovations<br>concerned | Nb of firms |
|--------------|------------------------------|--------------------|--------------------------------|-------------|
| Туре         | Open Innovation              | 33                 | 13                             | 8           |

#### **Overview:**

- Product and process innovations
- Mostly open innovations
- Mostly incremental innovation
- Mostly demand pull innovation
- Few barriers unless the lack of time

Nb : this table include only the categories regrouping a minimum of 5 verbatims

# Result 2 : 4 groups of innovation (PCA analysis)

|   | Type of innovation              | Determinants   | Barriers                                      | Innovation                     |
|---|---------------------------------|--|---|--------------------------------|
| 1 | Process<br>Incremental          | Cost reduction<br>Monitoring activity  | Lack of public support<br>(Lack of resources) | <u>I15</u>                     |
| 2 | <u>Product</u><br><u>Closed</u> | Follow regulations<br>(answer to market demand)<br>(solve a technical problem) | (Lack of time)                                | 17<br>(11, 13, 15, 19,<br>112) |
| 3 | Open innovation                 | Solve a technical problem<br>(Differenciate)                                   | Technical<br>competences                      | 2<br>( 1)                      |
| 4 | <u>Radical</u>                  | Result of R&D  | Lack of resources                             | 14                             |

## Result 3 : Influence of small towns

# **Conclusion & Limits**

- Q1: Do agri-food SMEs located in small towns linked both to rural and metropolitan areas have specific innovation practices?
- => Yes : 4 models of innovation are identified
- Q2 : What are the determinants of innovation produced by agrifood SMES localized in small towns ?
- => Mostly demand pull innovation and role of entrepreneurs
- Q3: Are open innovation practices a choice or a constraint in these areas?
- => Innovation is mostly open given the fact that firmas have to access external ressources due to the characteristics of small towns and SMEs
- Limits: Limited sample of 15 innovations and specific context, firms and sector
- **Further developments:** Statistical study and comparison with other sectors and territories

 Quote 1: This innovation consists in designing and building a room that allows the meat to be sorted and taken to "the place where it must be cut and where it must be packed"

 Quote 2: "I think we should have 1/3 of aid for the region and the State, and we did not applied for European support because [...] if the region give, Europe will not give."

• Quote 1: "Our strength is the secret, it is the know-how.".

• Quote 2: "What we lack is time, clearly, we're a small firm"

• Quote 1: The objective of this innovation was "to remove the surface oxidation problem".

 Quote 2: "When you make preserves with a certain level of sterilization, a certain level of cooking, you have constraints".
Open innovation was thus necessary to complement the resource base of the firm: "This company had the skills".

• Quote 1: As the entrepreneur explains, this innovation: "is a side result from a more fundamental research".

|                         | Axel                          | Axe2                          | Axe3                          | Axe4                          |                                     | Axe1                             | Axe2                             | Axe3                             | Axe4                             |
